SUMMARY

Data Scientist with mid-level experience leading a three-person team and working directly with executive leadership, including the Lead Data Scientist and CEO, to share insights on donation trends and define KPIs. The analysis and dashboards I built at Project 990 Inc. contributed to the organization winning the ARNOVA President's Award. Alongside my work, I regularly write technical blogs on topics such as data science, data engineering, LLM architecture, LangChain, and storage systems. I focus on presenting technical analysis in a way that is easy to understand for both technical and non-technical audiences.

EXPERIENCE

Data Scientist

Project 990 Inc. | Jan 2025 - Present | Columbus, Ohio, USA

- **Implement scalable data pipelines** to **ingest IRS financial grant data** from 7 different sources spanning from 2013 to 2021**, reducing processing time by 40%** and enabling structured data warehousing for multi-year financial analysis.
- **Merge and validate datasets** containing grant amounts and donor information using SQL. **Transform over 130,000 records** using Python, **conducting time series and geospatial analysis** to identify grant distribution trends that support **resource allocation and forecasting**.
- **Develop interactive Tableau dashboards** to visualize donation trends, assets to grant distribution ratios, and funding disparities. **Consult with executive leadership to define KPIs** and ensure data reproducibility by **documenting pipelines and maintaining version control using Git**.

Machine Learning Intern

ManekTech | May 2024 - Aug 2024 | Ahmedabad, Gujarat, India

- **Built** a **Python backend** for **AQI forecasting** with **automated data ingestion** from **REST APIs and developed** a **React.js interface** to monitor air quality trends in real time.
- **Refined preprocessing logic** for Linear Regression and Decision Tree models, **then improved model accuracy by 7.6%** through model optimization methods such as **hyperparameter tuning and feature selection**.
- **Enabled** early alerts for hazardous conditions using **data modeling techniques** and **deployed** the trained model into a **production pipeline** with custom monitoring scripts using **Docker.**

Data Science and Business Analytics Intern

Start Tech Academy | Jul 2022 - Sep 2022 | Ahmedabad, Gujarat, India

- **Built** an **image classification model** using **Convolutional Neural Networks** and **applied Natural Language Processing** techniques to **analyze 2,000 image-text pairs from educational materials**. **Optimized** the solution using **TensorFlow** and **Transformers**, **improving prediction accuracy by 11%** for text classification tasks.
- **Designed backend-to-frontend data pipelines** to track model performance and deliver insights. **Deployed Power BI dashboards** with interactive visualizations used for decision making.

PROJECTS

Insightify - RAG Based AI Knowledge Assistant | GitHub

- **Designed** an **AI knowledge assistant with a full RAG pipeline** to convert **10,000+ unstructured enterprise documents** including PDFs, TXT and emails into searchable insights using **LangChain** for chunking and **Sentence Transformers** for embeddings.
- **Created** a **FAISS vector index** with metadata for **fast semantic search**. **Integrated Hugging Face T5 models** for context-aware answers, delivering **20% faster, more accurate queries** on enterprise data.

Los Angeles Police Department Crime Detection | GitHub

- **Built scalable predictive models** on **900,000 LAPD crime records** using **stratified sampling** and **spatial clustering**. **Applied data modeling techniques** to organize datasets, **improving hotspot detection accuracy by 18%** and identifying key patterns from **unstructured geospatial data**.
- **Optimized distributed Apache Spark pipelines** with security measures and **applied heatmap** and **clustering methods** to study **risk zones, demographics and crime trends**. **Deployed results** through a **Streamlit dashboard** for location-based analysis and visualization.

EDUCATION

Post Graduate Programme in FinTech

Indian Institute of Technology Delhi (IIT Delhi) | Feb 2026 - Present | Online

Master of Science in Data Science

Indiana University | Aug 2023 - May 2025 | Bloomington, Indiana, USA

Bachelor of Technology in Computer Science

Indus University | Jul 2019 - Apr 2023 | Ahmedabad, Gujarat, India

SKILLS SUMMARY

Programming & Frameworks	**:** Python, Java, R, Scala, LangChain, LangGraph, JSON
Database & Cloud Platforms	**:** PostgreSQL, MySQL, Oracle PL/SQL, MongoDB, AWS (S3, Redshift, EMR), Google Cloud Platform
Data Engineering & ETL	**:** Apache Spark, PySpark, Airflow, dbt, REST APIs, Docker, Kubernetes, DevOps Practices, SSIS, SSAS
Data Visualization	**:** Tableau, Looker, Power BI, Cognos Analytics, Streamlit, Plotly, Grafana, Microsoft Excel, Gephi
Machine Learning & AI	**:** LLMs, RAG, NLP, TensorFlow, PyTorch, Hugging Face, Neural Networks, CNN, Feature Engineering

CERTIFICATIONS

Data Science Professional **(Oracle)**, Data Engineer **(AWS)**, Data Analytics Essentials **(Cisco)**, SQL Fundamentals **(DataCamp),** Data Science **(IBM)**
