SUMMARY

Data Scientist with 2 years of experience leading a three-person team and building scalable data pipelines and machine learning solutions. Experienced in processing multi-source datasets, performing large-scale data transformations, and applying time series and geospatial analysis to identify patterns for forecasting and resource allocation. **Skilled in developing and optimizing machine learning models, including regression and tree-based methods, and deploying solutions using APIs and containerized environments.** Works closely with executive leadership, including the Lead Data Scientist and CEO, to translate business requirements into models and analytical frameworks, with a focus on clear communication and collaboration. **The analytics and dashboards I built at Project 990 Inc. contributed to the organization winning the ARNOVA President's Award. Apart from work, I regularly write technical blogs on LLM architectures, Model Context Protocols, LangChain, LangGraph, Data Engineering, and Storage Systems.**

EDUCATION

Indian Institute of Technology Delhi (IIT Delhi)

Feb 2026 – Present

Professional Certification Program in FinTech

Online

Indiana University Bloomington

Aug 2023 – May 2025

Master of Science in Data Science

Bloomington, Indiana, USA

Indus University

Jul 2019 – Apr 2023

Bachelor of Technology in Computer Science

Ahmedabad, Gujarat, India

EXPERIENCE

Data Scientist

Jan 2025 – May 2026

Project 990 Inc.

Columbus, Ohio, USA

- **Implemented scalable ETL pipelines on Databricks** to ingest financial grant data from 7 different sources spanning from 2013 to 2021, **reducing processing time by 40%** and automating structured **data warehousing in Snowflake** for multi year financial and operational analysis.
- **Merged and validated datasets** containing grant amounts and donor information using SQL. **Transformed over 130,000 records using Python, applying predictive modeling and time series analysis** to identify grant distribution trends that supported resource allocation and forecasting.
- **Developed interactive Tableau dashboards** to visualize donation trends, asset-to-grant distribution ratios, and funding disparities. **Consulted with executive leadership to define KPIs** and ensured data reproducibility by documenting pipelines and maintaining version control using Git.

Machine Learning Intern

May 2024 – Aug 2024

ManekTech

Ahmedabad, Gujarat, India

- **Built a Python backend for AQI forecasting** with automated data ingestion from REST APIs. **Developed a React.js interface to monitor air quality trends**, supporting technology implementation and real time operational tracking.
- **Improved data preprocessing and feature selection** for Linear Regression and Decision Tree models, and **improved model accuracy by 7.6% through hyperparameter tuning and model evaluation techniques.**
- Enabled early alerts for hazardous conditions using **data modeling techniques and deployed the trained model using Docker** with custom monitoring scripts, **integrating CI/CD pipelines for automated deployment and operational support.**

Data Analytics and Machine Learning Intern

Jul 2022 – Aug 2022

Start Tech Academy

Ahmedabad, Gujarat, India

- **Built a CNN-based image classification model and applied NLP techniques** to analyze 2,000 image text pairs from educational materials. Optimized the solution using TensorFlow and Transformers, **improving prediction accuracy by 11% for text classification tasks.**
- **Designed backend-to-frontend data pipelines** to track model performance, **support A/B testing**, and deliver dashboard based insights for decision making. **Developed Power BI dashboards with interactive visualizations for performance monitoring and reporting.**

PROJECTS

Insightify - RAG Based AI Knowledge Assistant

[GitHub](#)

- **Designed an AI knowledge assistant with a full RAG pipeline** to convert **10,000+ unstructured enterprise documents** including PDFs, TXT and emails into searchable insights. Used **LangChain for chunking, LangGraph for orchestration, and Sentence Transformers for embeddings.**
- **Created a FAISS vector index** with metadata for **fast semantic search. Integrated Hugging Face T5 models** for context-aware answers, delivering **20% faster, more accurate queries** on enterprise data.

Financial News Sentiment Tracker

[GitHub](#)

- **Built a financial news analytics pipeline using FastAPI, MongoDB, and FinBERT** to process financial news articles and stock market data across AAPL, MSFT, TSLA, and NVDA. **Reduced manual market tracking effort by 65%** by aggregating stock movements into a unified daily analytics layer.
- **Implemented sentiment scoring and correlation analysis** using custom statistical logic, **improving sentiment classification by 32%** across financial news headlines. **Developed Streamlit dashboard to monitor price trends, sentiment movement, article volume, and ticker level market signals** across multiple time windows.

- Fraud Pattern Detection in Digital Payments

GitHub

 - Built a real time fraud detection pipeline using Kafka, PySpark and XGBoost to process over 590,000 transactions. Created window based features for transaction velocity, user activity, and risk patterns. Improved short burst fraud detection by 22%.
 - Implemented fraud scoring with Isolation Forest, Statistical Rules, Graph Based risk signals and achieved 8% fraud detection coverage. Used NetworkX to identify fraud rings and burst patterns. Built a React Dashboard to display alerts, risk signals, and investigation timelines.

- Book Recommendation System

GitHub

 - Built a full stack book recommendation system using Python and Flask that generates personalized suggestions using a content based filtering algorithm based on attributes such as genre, author and user interactions.
 - Implemented recommendation logic across 31 book genres and designed genre-based pages that allow users to explore books by category. Processed over 50,000 user interactions to refine recommendation logic and improved recommendation accuracy by 14%.

AWARDS

International Mathematics Olympiad (IMO) Gold Medalist
National Science Olympiad (NSO) Gold Medalist

SKILLS SUMMARY

Programming & Frameworks	: Python, R, Java, C, C++, Flask, LangChain, LangGraph
Data Visualization & BI Tools	: Power BI, Tableau, DAX, Looker Studio, Matplotlib, Seaborn, Adobe Analytics, Streamlit, Plotly, Grafana
Machine Learning & AI	: LLMs, NLP, RAG, Computer Vision, TensorFlow, PyTorch, XGBoost, Neural Networks, CNN
AI Tools & Platforms	: GitHub Copilot, Cursor, Vertex AI, Ollama, Microsoft Copilot, ChatGPT, Claude
Databases & Storage	: PostgreSQL, Azure SQL, MySQL, SQL Server, Spark SQL, MongoDB, Cassandra, DynamoDB
Data Engineering & Pipelines	: Alteryx, Apache Spark, PySpark, Delta Lake, Airflow, Azure Data Factory, dbt, Kafka, REST APIs, Hadoop, Hive
Analytics Tools	: Pandas, Numpy, Microsoft Excel, Microsoft PowerPoint, Google Sheets, VBA, Power Query
Cloud & Data Platforms	: AWS (Lambda, S3, EC2, SageMaker), GCP, BigQuery, Snowflake, Databricks, Azure Data Lake
Infrastructure & DevOps	: Docker, Kubernetes, Azure DevOps, Git, Linux, CI/CD

CERTIFICATIONS

Data Science Professional (Oracle), Data Science (IBM), AWS Data Engineer (AWS), Data Analytics (Cisco), Tableau Certification (Tableau), Microsoft Power BI Certification (Microsoft), SQL Fundamentals (DataCamp), Gen AI Certification (Indiana University), Prompt Engineering (DeepLearning.AI)
